26. (Currently Amended) An exercise machine comprising a wireless communication system, said wireless communication system comprising a holder arranged to support a portable electronic device in at least two orientations and a wireless communication device mounted to communicate with said portable electronic device positioned within said holder **in said at least**

two orientations, said holder formed of a material that is generally transparent to wireless signals and that is optically opaque.

27. (Previously presented) The device of Claim 26, wherein said wireless communication system comprises a transceiver that is disposed to one side of said holder.

28. (Previously presented) The device of Claim 26, wherein said wireless communication system comprises a transceiver and said holder is disposed between said transceiver and a user of said exercise machine.

29. (Previously presented) The device of Claim 26, wherein said wireless communication system comprises a transceiver and said transceiver is remotely mounted next to said holder.

30. (Previously presented) The device of Claim 26, wherein said holder includes a generally cylindrical portion and a recessed slot portion that intersect to effectively hold accessories.

31. (Previously presented) The device of Claim 26, wherein said device comprises a personal data assistant.

32. (Previously presented) The device of Claim 26, wherein said exercise machine comprises a treadmill.
